Clamping Garden Scissors

Clamping scissors integrates grasping and cutting actions together to simplify the picking up fruits, vegetables and flowers operations. It can clamp and cut materials and then release them at required location when a human hand closes and opens scissors handles.

The clamping scissors are simple and efficient device for harvesting fruits and vegetables for both farm workers and robotic harvesting systems such as picking up grapes, flowers and tomatoes etc. It also avoids the sick transfer by the human hand when picks up the fruits and vegetables.

Clamping scissors can work as traditional pruning scissors when the pin position is changed as the follow process.
